Environmental Policy

Last Review: 2nd February 2026

www.milebayauditing.co.uk

Working in conjunction with our customers and suppliers we strive to practice and deliver consistently high standards; focusing on providing professional auditing, compliance and training services that demonstrate our commitment to government legislation and requirements, prioritising road safety and working with transport operators and their teams to provide relevant, industry-leading support and customer service.

We take our environmental responsibilities seriously and work as a team to ensure that operations and processes contribute to continual environmental improvement.
We will commit to consider the environmental impact of our activities, managing our ways of working, reviewing our policies and procedures regularly. We are committed to operating legally, preventing pollution and embracing environmental opportunities.

Our key operational commitments are to:

- Support our clients to identify ways that they can be considerate of the environment while reviewing and improving their operations
- Continue to measure and reduce our carbon footprint
- Recycle and seek alternative renewable resources where possible
- Opt to work within and use office and site environments that have energy saving facilities
- Use video conferencing and virtual meeting facilities rather than travel, where possible
- Plan training events and meetings that consider attendees travel, fuel efficiency and carbon footprint
- Encourage the use of overnight accommodation if this will minimise extensive travel
- Design driver training that includes information on relevant environmental impacts
- Develop and deliver relevant environmental training to enhance the knowledge and skills of our colleagues

We recognise the potential impact that our activities have on the natural and built environment now and in the future. To mitigate this we commit to taking a lifecycle approach when assessing our products, services and operations to ensure impacts are managed and controlled throughout the supply of our products and services.

Supplier engagement is a crucial element to our environmental strategy and we will continue to review the implementation of our supplier commitments to influence and develop our supply base.

We know that consumers, colleagues, investors, suppliers, regulators and neighbours all value improved environmental performance. We will continue to assess, communicate and improve our environmental performance and influence our suppliers and customers to do the same.

Owners of the policy:

The policy is owned and supported by the Director of Milebay Auditing Limited and the team.

Monitoring and review:

This policy will be reviewed every year or earlier if there is a change in relevant employment legislation or within the business' ways of working.
